```
                     Assignment 12
                  mySql Embedded in C++
                               25 points
```

For this assignment you will essentially be redoing Assignment 10,
but in C++ rather than php, with the appropriate changes. You will
need a menu function that displays a menu allowing the user to

   1)enter an author name
   2)enter a publisher
   3)quit

If the user enters an incorrect option, display a message and then
redisplay the options. If there is no data for either query, display
an appropriate message.

Divide your program into functions and have appropriate and extensive
documentation.

Note: This is a required assignment for all 566 students! If you do
not do it or do not put a significant effort into it, it may result
in your grade being lowered. Also, as this is the last assignment,
no late assignments will be accepted.
